PLAN FOR BECOMING THE BEST SOFTWARE ENGINEER

Name : Rahul Goel
Reg No: RA1911030010094
Batch: CSE-O2

I will explain my devised plan in 9 total steps.

STEP 1:-

Be fully clear about my goal.

Building a career is not child's play but planning is it not that hard.Thoughts I have in my head about my goal.

- I want to build my career as a software engineer
- I want to work as a software engineer at an established IT company.
- I want to work as a team member and get paid well for it.

STEP 2:-

Be very clear about the languages i want to learn.

In my case

- Java
- Python
- C++

STEP 3:-

Complete my graduation from a good college and in the related field.

I'm already pursuing Computer Science Engineering from a renowned institute. (SRMIST)

STEP 4:-

Have all the material i will need to cover and learn from.

It's not easy sorting out good material. Apart from the supplement given by my college i will read books of authors recommended by my professors.

STEP 5:-

Study codes by already experienced developers i know and trust.
Two of my uncles currently work at amazon.com and have amazing coding skills. I plan to learn from the best.

STEP 6:-

Find a group or team of people who can help me achieve this endeavour.

I have a really smart group of friends and most of them are really good coders. So i can say i have a healthy environment.

STEP 7:-

Build Projects myself.

I plan to learn coding by programming practical situations of daily life and making them my projects which I am sure will drastically improve my skills.

STEP 8:-

Master my soft skills.
These are the most important aspect of life and remain forever. Also i have heard a lot from my father about these are the skills that later matter in real life and the corporate world.

STEP 9:-

Ace my interview.

This very small part is the real test of the plan. Messing this up in any way could make the above 8 steps completely useless.

There is no such thing as a perfect plan but there are good ones and this one feels great. It's now in my hands how efficiently and effectively i execute this plan.
